Bhopal, Madhya Pradesh | manasvikhare9@gmail.com | +91 83491 41735 | [github](#) | [linkedin](#)

PROFESSIONAL SUMMARY

Full-stack developer and final-year CSE undergraduate (CGPA 8.97/10) with hands-on experience shipping production web applications end-to-end — from React front ends to Python/Flask back ends integrating third-party REST APIs. Comfortable across the JavaScript and Python ecosystems, with additional exposure to applied AI/ML (Google Cloud Vertex AI, Generative AI Fundamentals — 95.8/100) that aligns with agentic and AI-driven product work. Fast learner, strong Git/version-control discipline, and proven ability to take a feature from design to deployment independently.

TECHNICAL SKILLS

- **Languages:** JavaScript, Python, Java, C++, SQL, HTML, CSS
- **Frontend:** React.js (React 18), React Router, CSS Grid, responsive UI design
- **Backend & APIs:** Flask, REST API design & integration, Git/GitHub, CI/CD basics (GitHub Actions)
- **Cloud & Data:** Google Cloud (Vertex AI), Microsoft Azure, TensorFlow, OpenCV
- **Currently deepening:** *Node.js, Ruby, PostgreSQL — actively building alongside coursework to round out the MVC/full-stack toolchain*

PROJECTS

FOSSEE Workshop UI — Full Redesign for IIT Bombay Initiative *React 18 · React Router · CSS Grid · Vercel*

- Rebuilt a 9-page production website end-to-end in React, translating design requirements into scalable, reusable components and clean routing architecture.
- Implemented CSS Grid-based responsive layouts and deployed the app live on Vercel (fossee-workshop-ui-woad.vercel.app), managing the full build-to-deploy pipeline solo.
- Directly demonstrates the JS/React front-end skills and deployment ownership this role requires from day one.

AgriScan — Full-Stack Crop Disease Detection Platform *Python · Flask · REST API Integration · MobileNetV2 · Deployed on Render*

- Built and shipped a complete full-stack web application: Flask REST backend serving a MobileNetV2 deep-learning model (84.6% accuracy, 57 diseases, 14 crops) at ~25ms inference, deployed live on Render.
- Designed and integrated a third-party REST API (OpenWeatherMap) to power real-time disease-risk forecasting — hands-on experience with the API design, integration, and debugging work central to this role.
- Built a multi-field dashboard for simultaneous monitoring across farm sites, mirroring the scalable-UI + backend-integration pattern used in production agile teams.

Face Recognition Attendance System *Python · OpenCV · Machine Learning · CSV Data Pipeline*

- Built a real-time recognition system (Haar Cascade, LBPH, KNN) with automated CSV-based data storage — reinforcing backend logic, debugging, and data-handling fundamentals applicable to agentic workflow automation.

CERTIFICATIONS

- **Google Cloud — Generative AI Fundamentals:** 95.8/100 Vertex AI, prompt engineering, LLM fine-tuning, responsible AI [smartbridgecerti](#)
- **Microsoft Azure — Data Fundamentals (DP-900):** 925/1000 cloud data services and database concepts [microsoftcerti](#)
- **NPTEL — Marketing Analytics:** 97/100, Top 5% nationally [nptelcerti](#)

EDUCATION

VIT Bhopal University — B.Tech, Computer Science and Engineering
CGPA: 8.97/10 | Batch 2022–2026

LEADERSHIP & EXTRA-CURRICULAR

- Student Coordinator, Gujarati Club & Ramanujan Mathematica Club — led execution of multiple tech and non-tech mega-events.
- Selected and awarded for an inter-university public health presentation among top-performing students.
